

Prismatic guide units with forced return clamp and replaceable guide plates

Design According VDI 3357

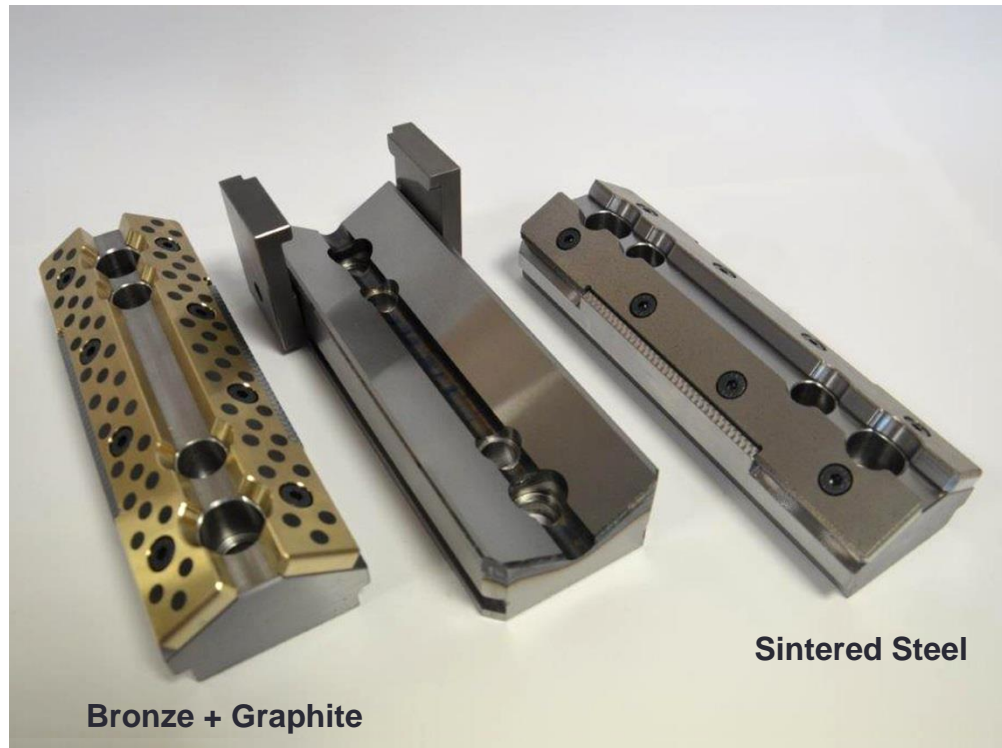

Thanks to a new design, the female and the male of the cam bottom V drivers with replaceable plates, are now exactly interchangeable with the VDI 3357 standard.

Now is possible to use the male with replaceable plates in pair with a standard female guide VDI 3357 and opposite.

In case of substitution of a standard male VDI 3357 in bronze graphite, without to change the full set, now is possible to use the GSB OILLESS male with replaceable plates, and more, is possible also to chose the sliding plates type.
